excerpt from forest culture and eucalyptus trees in presenting to the public a printed copy of my lecture on forest planting and australian gum trees delivered before the santa barbara college association for the benefit of the library it is necessary to preface the lecture by the statement that it appears in print in consequence of repeated demands for the publication from several localities in the southern part of california forest protection the want of trees in almost every part of the state is manifest to all owners of land who are eager to begin the planting the only question being what shall we plant the rapidity of growth of the blue gum and the facility with which it can be propagated is a feature of great importance but information is wanted much that has been written on the subject is mere speculative theories often contradictory and too uncertain to merit the confidence necessary to base such an important industry this industry not only necessitates that the protection should be cheaply and quickly obtained but that the tree should have a value for mechanical or other purposes this value gives confidence to the planter without which it can not be expected the work will go on the inquiry comes what is the value of the tree about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at forgottenbooks.com this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

this book analyses the political and economic causes mechanisms and impacts of the industrial tree plantation boom in china in the past two decades the industrial tree plantation sector has been expanding rapidly in china especially in guangxi province based on extensive primary data this book concentrates on the political economy of the sector s expansion with a focus on the recent and dramatic agrarian transformation involving the land labour nexus the impact on villagers livelihoods the role of the state and political reactions from below the book questions the stereotypical portrayal of local communities as the excluded villager instead it demonstrates that this is a much more complex issue with varying levels of passive and active forms of inclusion and exclusion within local communities while most literature focuses on crop booms for food and biofuel production the industrial plantation sector has largely been overlooked despite it being one of the biggest sectors in the current rush for land filling this lacuna this book also reveals that while china has traditionally been painted as a major land grabber and consumer of crop booms it is also a destination of foreign investment in doing so the book highlights how large scale foreign land deals can also take place in traditional grabber countries like china which feeds into the wider debates about global land politics and resource grabbing this book will be of great interest to students and scholars of land grabbing rural development and agrarian transformations as well as chinese development
